This drawing shows the recommended string design for High Voltage PV modules connected to a PV Link. Pika Energy defines these modules as having open circuit voltage (Voc) of 60V or greater and short circuit current of 7 or less.

**More modules may be acceptable in warmer climates.

For additional information, please contact Pika Energy at support@pika-energy.com.

High Voltage PV Modules / String Design [HVPV-01]

- 1 PV Link per string
